AstraZeneca United States Business Center

The Challenge.....

When the time came for the AstraZeneca to select a Systems Integrator for their Integrated Security System at the expanding United States Business Center, the vendor qualification process was tedious. Security Instrument Corporation emerged as the partner of choice. Separate legacy systems were currently deployed throughout the campus, but with the addition of several new buildings, and a goal of a converged integrated system, the project would be difficult. An integrator with in-house engineering, capable of analyzing the details surrounding migration, would be necessary.

The Solution.....

Security Instrument Corporation designed and implemented a highly integrated security system for AstraZeneca. The System is built upon the technology from industry leading manufacturers, and operates seamlessly from a single user console relying on cutting edge integration protocols. The system is comprised of over 600 Access Control Doors, 200 CCTV Cameras - recorded in high quality on redundant disk arrays - and 140 Intercom Stations.

Security Instrument Corporation and AstraZeneca Pharmaceuticals have maintained a mutually beneficial

partnership for over 10 years. Because of this extended relationship, Security Instrument Corporation has been able to ensure all projects and services are provided in a manner that not only align with the Corporate Security Strategic Goals, but also incorporate all standard operating procedures set forth by the 21 CFR Part 11 validation. This results in *reliable system performance, standardized installations, and efficient and accurate service.*

About AstraZeneca.....

AstraZeneca is a global, innovation-driven biopharmaceutical business with primary focus on the discovery, development and commercialization of prescription medicines for gastrointestinal, cardiovascular, neuroscience, respiratory and inflammation, oncology, and infectious disease. AstraZeneca operates in over 100 countries and its innovative medicines are used by millions of patients world wide.
